-

Projects

Online voting system using blockchain

Web Application: Using React.js and Blockchain(Solidity)

Software : IDE: VS, Node.js and npm, Ganache, Metamask and Chrome.

This project is a combines of Aadhar authentication and blockchain technology to create a secure and transparent online voting system. It verifies voter identity through Aadhar, records votes on a tamper-proof blockchain, and ensures privacy and efficiency while adhering to legal requirements.

Online covid-19 testing management system

Web Application : Using HTML,CSS, PHP & MySQL

Software : IDE: VS, MySQL, Xampp CP(Apache) and Chrome.

An online COVID-19 testing management system streamlines testing processes, including appointment scheduling, result tracking, and data management. It ensures secure user authentication, integrates with external systems, and provides notifications and analytics. Mobile-friendly and compliant with privacy regulations, it enhances efficiency in testing and reporting.

Multi-blogging frontend for website

Web Frontend : Using HTML,CSS and Bootstrap

Software : IDE: VS and Chrome.

A multi-blogging frontend for a website allows multiple authors to create, manage, and customize their own blog posts. It includes features like user authentication, blog post management, user profiles, comments, search functionality, responsive design, SEO optimization, performance optimization, and analytics.
